

Environmental Policy

THE DAY WE CEASE GETTING BETTER IS THE DAY WE STOP BEING GOOD!

Environmental issues are an integral part of LEAX Falun's daily business where we design and assemble propeller shaft, manufacture and assemble transmission components. We comply with legal requirements and work with continuous development of methods to protect the environment, prevent pollution and be a good example in the environmental work for our employees and other stakeholders.

We continuously reduce our environmental impact by working for the national environmental goals, focusing on the following three objectives

FRESH AIR

Through a more environmentally friendly choice when purchasing our transport vehicles and by increasing the awareness of our traveling staff, we will contribute to the environmental goal fresh air.

NON-TOXIC ENVIRONMENTAL

By regular monitoring of the company's chemical used and acquiring knowledge of the health and environmental hazards and thereby replacing hazardous chemicals with less dangerous ones, LEAX Falun will contribute to the national goal.

LIMITED CLIMATE IMPACT

By using only renewable electricity and energy and reducing our consumption, we will contribute to a reduction of the climate impact.
