

Environmental Policy

THE DAY WE CEASE GETTING BETTER IS THE DAY WE STOP BEING GOOD

Environmental issues are an integrated part of the daily activities of LEAX Falun where we manufacture propeller shafts and transmissions components. We fulfil all legal requirements and work constantly to develop our methods and practices to protect the environment, prevent pollution and to be a good example in environmental work to our employees and other stakeholders.

CLEAR LAKES AND RIVERS

With good technology and conscious choices, we reduce the consumption of water. We shall never release contaminated water into the municipal storm water and waster water networks. With efficient routines and good knowledge of our employees we minize the risk of accidental releases.

FREE OF TOXINS

We use our chemical product register to review and evaluate all chemicals used in our business, and if possible, we replace or remove the products that can represent a risk to human beings or the environment.

CLIMATE IMPACT

Trough awareness about energy efficient solutions we can contribute to reduce our climate impact.
